With this issue of the Current List the Medical Library Association joins with the Friends of the Army Medical Library in sponsoring this cooperative plan of promoting medical research. These two organizations are composed of persons who by their activity and recognized standing in the field of medical science in its broad aspect are believed best qualified as godparents of this undertaking. Neither organization is called upon to assume financial responsibility, for the continuation of the project depends entirely upon its meriting the support required to pay its own way. It will continue to be the aim to keep expenses at the lowest possible level and to give those who subscribe to the publication far greater value than they are called upon to pay for. The policy will be to provide the greatest possible service to those engaged in the advancement of medicine. Thus far, the response to this effort has been sufficiently encouraging to warrant the expectation that the means for its continuation will not be wanting. It is realized that only by satisfying the needs of those receiving the Current List can we justify its continuance. It is hoped, therefore, that all subscribers will aid in making suggestions for improvement so as to bring the advantages of the Current List to the attention of those who may be able to use it with profit.

CURRENT LIST OF MEDICAL LITERATURE is published weekly and lists of RECENT BOOK ACQUISITIONS are issued several times per year as supplements. The subscription price for both is $5.00 per year in the United States and $5.50 per year in other countries. The Recent Book Acquisitions may be obtained separately at $1.00 per year.
